

Custom 260 Curved Stairlift

Custom 260 Curved Stairlift

High reliability and quality throughout

Suitable for various staircases

The 260 stairlift is designed specifically for staircases that feature any configuration. It negotiates bends, landings and corridors with ease. The 260's slimline carriage and rail also make it suitable for narrower staircases, and when folded away leaves plenty of room for other stair users.

Robust, quality made

The 260 offers the best in British stairlift engineering with quality throughout thanks to its well made and robust design. Renowned as one of the most reliable stairlifts on the market it also features battery back-up so it will continue to operate during a power cut.

Latest safety features

The 260 comes with the very latest safety features including stop sensors which automatically detect obstructions on the staircase, safety belt harness, limit sensors, swivel seat locking function and electronic braking systems which control the speed of the stairlift making every journey safe and hassle free.

Simple operation

Controlling the stairlift is comfortable for all users even for those with reduced dexterity. The ergonomically designed toggle switch is easy to use and only requires light pressure.

Remote controls

The wireless remote controls allow you to send the stairlift up and down the staircase when required. Every stairlift comes with two remote controls as standard.

Customisable & adaptable

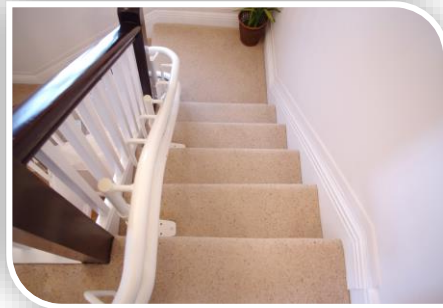

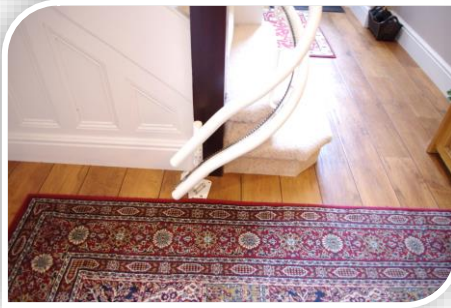

Tailored track options and choice of upholstery colours available

Slimline profile

The arms, seat and foot rest can be folded upwards allowing plenty of space to pass the stairlift when required.

Bespoke track

The track can be bespoke to staircases that feature 90° bends, 180° turns, quarter landings, multiple bends, fan shaped steps, run-on starts / ends either internal or external.

Colour options

The 260 features a comfortable padded, premium vinyl upholstery which comes in a variety of colours allowing the stairlift to blend seamlessly into your home decor.

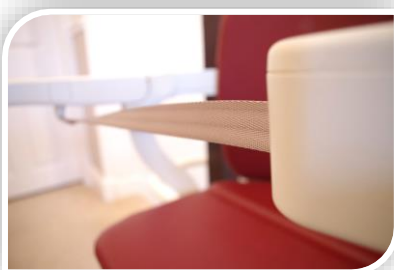

On / off switch

Fitted with a simple on/off button and a lockable key switch which enables the user to deactivate the stairlift when required. This can help stop any potential unauthorised use.

Fixed to the stairs

The track is attached to the stairs treads (not the wall) meaning no unsightly structural work.

Safety belt

The safety belt can be used for extra security. It neatly retracts away after use.

Linked foot rest

The foot rest offers comfort whilst travelling on the stairlift. It is linked to a lever so that it can be folded and unfolded without the need for bending down.
